0-Day Protection against the WMF Exploit

CSA Protection - WMF Exploit

CSA Provides 0-Day Protection Against WMF Exploit

PRIVEON

- 0-Day Exploit

- Bugtraq Post on 12/27

“Warning the following URL successfully exploited a fully patched windows xp system with a freshly updated norton anti virus.

unionseek.com/d/t1/wmf_exp.htm

The url runs a .wmf and executes the virus”

- SANS – Internet Storm Center 12/28

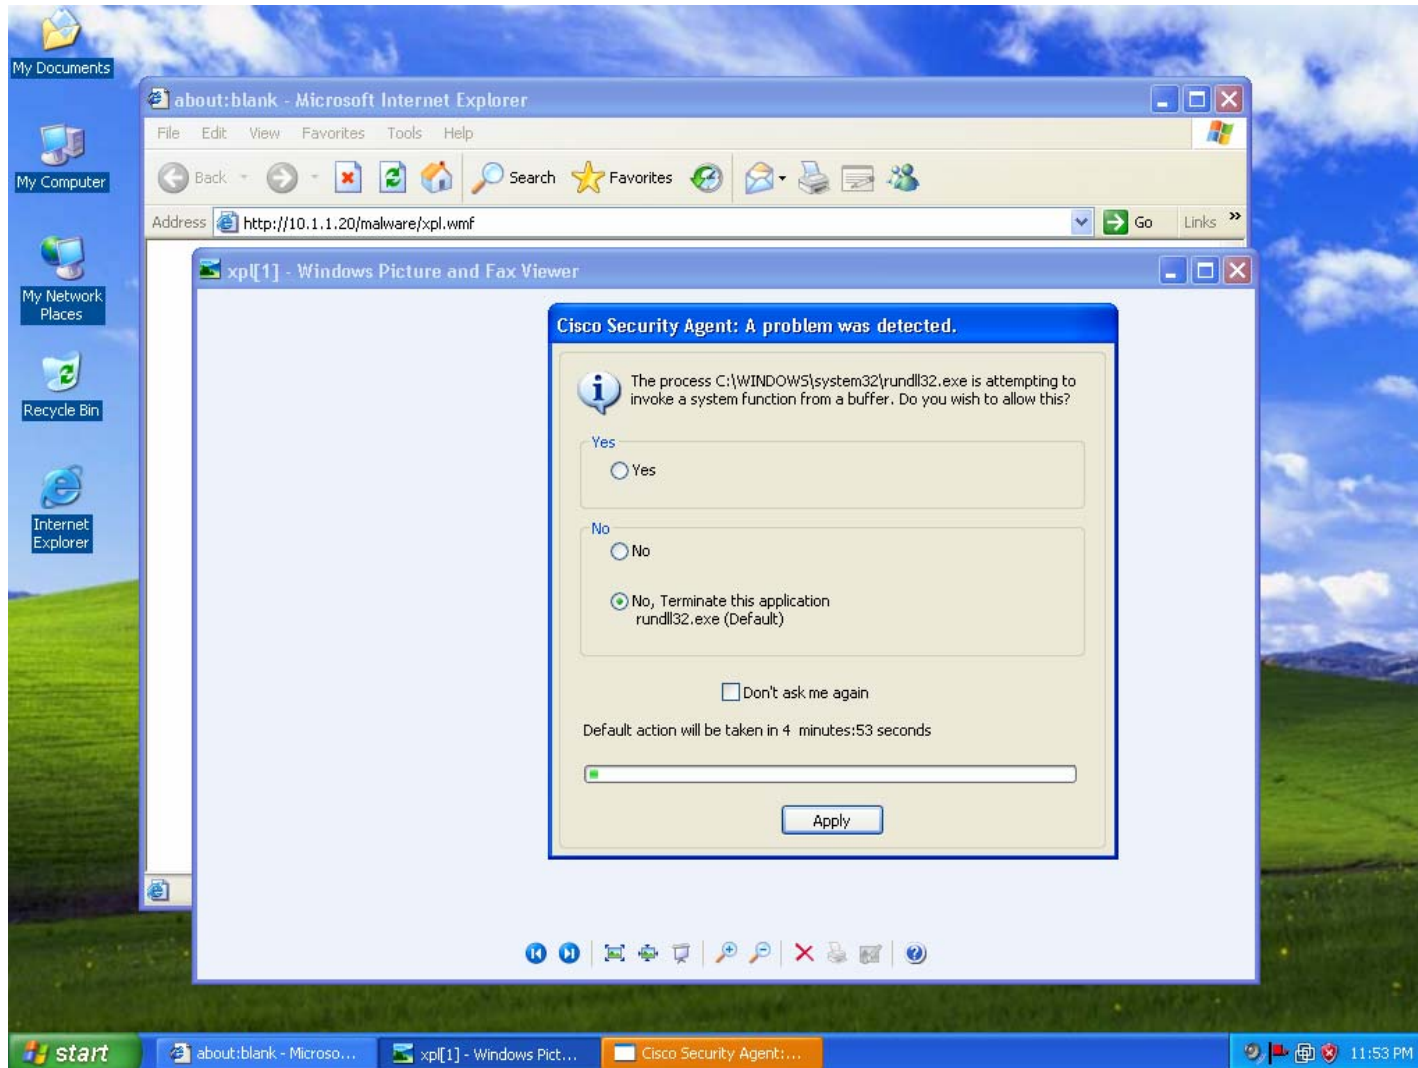

“We are moving to Infocon Yellow for a bit. There has been some debate among the handlers about this step, but considering that a lot of people are on holidays and might otherwise miss the WMF 0-day problem, we have decided to raise the alert level.”

“While the original exploit only referred to the Microsoft Picture and Fax Viewer, current information is that any application which automatically displays or renders WMF files is vulnerable to the problem. This includes Google Desktop, if the indexing function finds one of the exploit WMFs on the local hard drive ...”

CSAMC Event Details

The screenshot displays the Management Center for Cisco Security Agents V4.5 interface. The main window shows the details of a security event. On the left, a sidebar lists 'Events > Event Log' with a table of recent events. The main content area is titled 'Policy rule details' and 'Event details'.

#	Date	Host
266	12/29/2005 12:53:38 AM	XPSP2
265	12/29/2005 12:53:37 AM	XPSP2
264	12/29/2005 12:47:53 AM	XPSP2

Policy rule details:

Description	Network Applications, Access system functions from a buffer
Module	General Application Permissions - all Security Levels [W, V4.5.1 r639]
Cisco Security Agent query	<p><i>English:</i> The process @appname is attempting to invoke a system function from a buffer. Do you wish to allow this?</p> <p><i>Spanish:</i> El proceso @appname intenta invocar una función del sistema desde un búfer. ¿Desea permitirlo?</p> <p><i>French:</i> Le processus @appname tente d'invoquer la fonction système à partir d'un tampon. Voulez-vous autoriser cette opération ?</p> <p><i>German:</i> Der Prozess @appname versucht, eine Systemfunktion, aus einem Puffer aufzurufen. Soll dieser Vorgang zugelassen werden?</p> <p><i>Italian:</i> Il processo @appname sta tentando di richiamare una funzione di sistema da un buffer. Autorizzare questa operazione?</p> <p><i>Japanese:</i> @appname @@@@@@ @@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@</p> <p><i>Korean:</i> @appname@() @@@@ @@@ @@@ @@@ @@@ @@@ @@@@@@?</p> <p><i>Simplified Chinese:</i> @appname @@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@</p>

Event details:

Event Text	The process 'C:\WINDOWS\system32\rundll32.exe' (as user XPSP2\Joe User) attempted to call the function CreateFileA("a.exe") from a buffer (the return address was 0xc60e4). The code at this address is '32c05050 b040c1e0 1850ff75 38ff5508 89454433 c066b80c 012be08b f48d5e04'. This either happens when a process uses self-modifying code or when a process has been subverted by a buffer overflow attack. The user was queried and a 'Terminate' response was received.
Event Time	server: 12/29/2005 12:53:37 AM; agent: -1 hour
Code	HACL_OVERFLOW_QUERY

CSAMC Default Desktop Policies (CSA 4.5.1.639)

PRIVEON

The screenshot displays the Management Center for Cisco Security Agents V4.5 web interface. The browser window shows the URL <https://dell750-2/csamc45/webadmin>. The interface includes a navigation menu with options like Events, Systems, Configuration, Analysis, Maintenance, Reports, Search, and Help. The main content area is divided into two sections: Attached Policies and Combined Policy Rules.

Attached Policies

Policy Name	Version	Description	Rule Modules
Document Security - Windows	4.5.1 r639	Policy to protect user documents	1 module
Email Client - Basic Security - Windows	4.5.1 r639	Basic application enforcement policy for email client software.	3 modules
General application - Basic Security - Windows	4.5.1 r639	Basic, Application independent security policy for Windows	3 modules
Installation Applications - Windows	4.5.1 r639	Software Installers for Windows	4 modules
IP Stack - Internal Network Security	4.5.1 r639	Policy for protecting the IP Stack on internal systems	1 module
Network Personal Firewall	4.5.1 r639	Control network access and provide some end user access controls.	1 module
Operating System - Base Protection - Windows	4.5.1 r639	Basic protection for Windows OS	5 modules
Virus Scanner - Windows	4.5.1 r639	Application enforcement policy for virus scanner software.	1 module

Combined Policy Rules

View **All** rules

Enforce rules: 121 (click the header links to sort)

ID	Type	Status	Action	Log	Description	Rule Module
529	Application control	Enabled			Email applications, invoke Cmd Shells...	Email Client Module - base security [V4.5.1 r639]
526	File access control	Enabled			Email applications, read/write dynamically quarantined files	Email Client Module - base security [V4.5.1 r639]
64	Network access control	Disabled			All Applications, server for TCP and UDP services	Installation - Application Permissions Module [V4.5.1 r639]
113	Registry access control	Enabled			Applications processing untrusted content, write Local User Account keys	System Hardening Module [V4.5.1 r639]
600	Application control	Enabled			All Applications, Invoke MS sysocmgr	Installation - Application Detection - Install detected [V4.5.1 r639]
160	Application control	Enabled			All Applications, Invoking MS sysocmgr	Installation - Application Detection - Install detected [V4.5.1 r639]

CSA Protection - WMF Exploit

CSAMC Event Details (cont...)

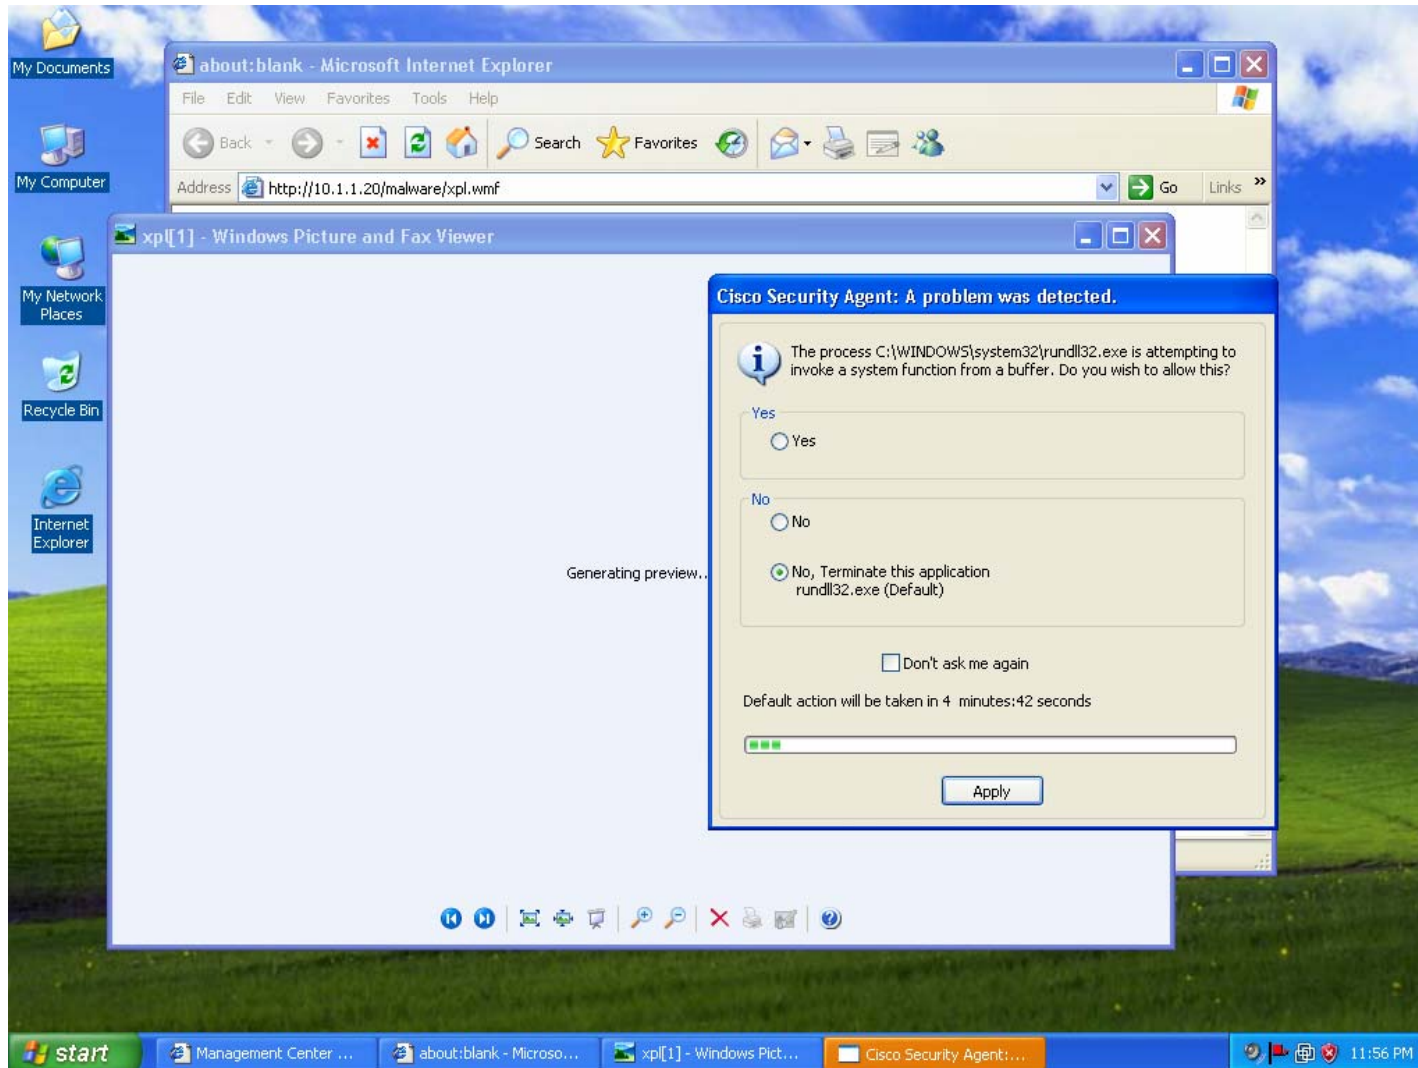

- The following slides step the user through the entire WMF exploit and a Spyware version of payload execution to demonstrate how CSA provides protection at all levels using default desktop policies.

Note: This is for demonstration purposes only. In a normal CSA deployment the user would not see any of these query messages. CSA would provide protection without user interaction.

CSAMC Event Details (Steps 1-5)

The screenshot displays the Management Center for Cisco Security Agents V4.5 interface. The browser address bar shows <https://dell750-2/csamc45/webadmin>. The interface includes a navigation menu with options like Events, Systems, Configuration, Analysis, Maintenance, Reports, Search, and Help. A table of events is shown below, with columns for ID, Date, Host, Severity, and Event details. The events listed are:

#	Date	Host	Severity	Event
271	12/29/2005 12:59:18 AM	XPSP2	Notice	The process 'C:\Documents and Settings\Joe User\Local Settings\Temp\a.exe' (as user XPSP2\Joe User) attempted to access the registry key '\REGISTRY\MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Explorer\Browser Helper Objects', value ". The attempted access was a write (operation = CREATE/KEY). The user was queried and a 'Yes' response was received. Details Rule 131 Wizard Find Similar
270	12/29/2005 12:58:49 AM	XPSP2	Notice	The process 'C:\Documents and Settings\Joe User\Local Settings\Temp\a.exe' (as user XPSP2\Joe User) attempted to access the registry key '\REGISTRY\MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Explorer\Browser Helper Objects\{3386130d-6456-46b9-b80c-87e1772b0929}', value ". The attempted access was a write (operation = CREATE/KEY). The user was queried and a 'Yes' response was received. Details Rule 131 Wizard Find Similar
269	12/29/2005 12:58:20 AM	XPSP2	Notice	The process 'C:\Documents and Settings\Joe User\Local Settings\Temp\a.exe' (as user XPSP2\Joe User) attempted to access 'C:\WINDOWS\system32\ihd.dll'. The attempted access was a write (operation = OPEN/CREATE). The user was queried and a 'Yes' response was received. Details Rule 130 Wizard Find Similar
268	12/29/2005 12:57:43 AM	XPSP2	Notice	The current application 'C:\WINDOWS\system32\rundll32.exe' (as user XPSP2\Joe User) tried to execute the new application 'C:\Documents and Settings\Joe User\Local Settings\Temp\a.exe'. The user was queried and a 'Yes' response was received. Details Rule 511 Wizard Find Similar
267	12/29/2005 12:57:06 AM	XPSP2	Notice	The process 'C:\WINDOWS\system32\rundll32.exe' (as user XPSP2\Joe User) attempted to call the function CreateFileA("a.exe") from a buffer (the return address was 0xc5d6c). The code at this address is '32c05050 b040c1e0 1850ff75 38ff5508 89454433 c066b80c 012be08b f48d5e04'. This either happens when a process uses self-modifying code or when a process has been subverted by a buffer overflow attack. The user was queried and a 'Yes' response was received. Details Rule 172 Wizard Find Similar

At the bottom of the interface, there is a status bar showing "No rule changes pending" and a "Generate rules" button. The user is logged in as "iboggis".
